

# THE WARE LAB

JOSEPH F. WARE, JR.  
ADVANCED ENGINEERING LAB

ANNUAL REPORT 2021-2022

COLLEGE OF ENGINEERING  
JOSEPH F. WARE JR.  
ADVANCED ENGINEERING LAB  
VIRGINIA TECH

[eng.vt.edu/warelab](http://eng.vt.edu/warelab)

## Executive Summary

This annual report summarizes activities at Virginia Tech's *Joseph F. Ware, Jr. Advanced Engineering Lab* housed in the College of Engineering for academic year 2021-22. The report includes sections on lab expenditures, student demographics, and competition activities. This year 557 Virginia Tech students completed all safety requirements needed for lab entry.

Lab expenditures for maintenance and repair of the truck and trailers amounted to \$21,800, including extensive repairs of our existing goose-neck trailer (\$17,200). Fuel expenditures for trips to competitions totaled \$9,500 and equipment and material expenditures amounted to \$38,400 including the purchase of a new goose-neck trailer (\$23,200). The grand total for all lab expenditures for 2021-22 was \$69,700.

In addition, many Ware Lab teams met the challenge by excelling at competition events. *Baja SAE* earned 5<sup>th</sup> out of 93 at their SAE (*Society of Automotive Engineers*) sponsored event in Cookeville, Tennessee. *Concrete Canoe* took 2<sup>nd</sup> place in their regional AISC (*American Society of Civil Engineers*) event at Virginia Military Institute in Lexington, Virginia and *Design Build Fly* earned 5<sup>th</sup> out of 97 at their Wichita Kansas AIAA (*American Institute of Aeronautics and Astronautics*) event. Also, our *Hybrid Electric Vehicle Team* placed 4<sup>th</sup> out of 11 pre-screened teams in the final year (Year 4) of the EcoCAR Mobility Challenge in Yuma, Arizona.

Ware Lab teams must raise the majority of their funds through sponsorship from corporate supporters such as Swearingen, General Motors, Monoflow, Yamaha, and Lockheed Martin. Collectively, our teams raised more than \$181,000 in in-kind and monetary contributions. In addition, Virginia Tech's *Student Engineer's Council* (SEC) contributed \$37,600 to Ware Lab teams this year alone! Our teams simply could not compete in world class competition events without this generous support.

Virginia Tech served as host for the AISC (*American Institute of Steel Construction*) *National Steel Bridge Competition*. Our own Virginia Tech *Steel Bridge* team earned a slot at the event by capturing first place in all categories at their regional event in Lexington, Virginia. Our team placed in the top 50% at the national competition against the nation's top universities and colleges in the field.

This report also has demographics on team academic levels, academic majors, gender, ethnicity along with demographic trends. A new section illustrating Ware Lab team posters has been added in Appendix A. These posters demonstrate the high degree of dedication necessary for teams to be competitive at regional and international events.

## Introduction

The Joseph F Ware, Jr. Advanced Engineering Lab at Virginia Tech (aka *Ware Lab*) is an undergraduate design facility housed within Virginia Tech's College of Engineering in the Military Building on the main campus. The facility is home to ten undergraduate teams from various departments within the college. Ware Lab staff consists of:

- Dr. Keith Thompson - Director
- Dewey Spangler, PE - Manager
- Phillip Ratcliff - Assistant Manager

The Ware Lab spans over of 10,000 square feet of space divided into four main areas. Each area requires varying levels of safety certification as specified in the *Ware Lab General Policy Manual*. These areas include:

1. General Areas
  - a) First floor – (Room 100, 104, 106 through 114, 117) – Fig. 1.
  - b) Basement – (Room 18) – Fig. 2.
2. Machine Shop – (Room 101) – Fig. 1.
3. Welding Shop – (Room 102) – Fig. 1.
4. Administrative Areas – (Room 101A, 101AA, 103, 105) - Fig. 1

Figure 1 – Ware Lab Main Floor.

Figure 2 – Ware Lab Human Powered Submarine Bay.

## Faculty Advisors, Team Leads, and Team Safety Officers for 2021-22

557 students from various academic departments completed the Ware Lab general survey this year. Table 1 is a list of WL faculty advisors and Table 2 lists student team leadership. The last column in Table 2 indicates each team's safety officer. These students are responsible for insuring that team members conduct themselves in a safe manor according to provisions in the Ware Lab Policy Manual. In Appendix A Ware Lab team posters are displayed showing the level of sophistication our design team are engaged in.

**Table 1 – Ware Lab Faculty Advisors for 2021-22**

Ware Lab Team	Faculty Advisor	Academic Department
<a href="#">Astrobotics</a>	Kevin Shinpaugh	Aerospace and Ocean Engineering
<a href="#">Baja SAE</a>	Jared Bryson	Mechanical Engineering

	Nathan Hayes	Vice President	
	Oscar Johansson	Treasurer	
	Mary Claire Armistead	Sponsor Relations	-
	Hannaneh Shadabi	Event Coordinator	
<b>SailBOT</b>	Jay Provost	Team Lead	Jay Provost
<b>Steel Bridge (SBT)</b>	Chris Padgett	Co-Captain	Chris Padgett
	Gavin Harwell	Co-Captain	
	Jack Grondine	Co-Captain	
	Justice Foster	Co-Captain	

## Team Competition Results and Annual Budgets

Table 3 is a summary of team rankings at various regional and international competition events throughout North America for 2021-22. VT Concrete Canoe Team took 2<sup>nd</sup> place in their ASCE regional event and Baja SAE won 5<sup>th</sup> place at their international SAE event in Clarksville, Tennessee. Also, DBF earned top 5% in their event in Wichita Kansa out of 97 finalists (Figure 3) and HEVT was a top five team at their Year 4 (completion year) event in Yuma, Arizona.

Our Steel Bridge team won first place in all categories at the AISC regional event in Lexington, Virginia. Categories included: stiffness, construction speed, efficiency, economy, aesthetics, and constructability. The team's performance insured them a spot in the AISC national event hosted by Virginia Tech this year. Our Virginia Tech team scored in the top 50% against the nation's best steel bridge competition teams!

**Table 3 – Ware Lab Team Competition Results for 2021-22**

Team	Competition	Location	Ranking
Astrobotics	NASA Robotic Mining Completion	Meritt Island, FL	Did not attend.
Baja SAE	Baja SAE Tennessee	Tennessee Tech, TN	1 <sup>st</sup> in <i>Suspension and Traction</i> . 8 <sup>th</sup> in <i>Maneuverability</i> . 4 <sup>th</sup> in <i>Endurance</i> . <b>5<sup>th</sup> overall out of 93</b>
Baja SAE	Baja SAE Rochester	Rochester, NY	26 <sup>th</sup> out of 88
BOLT	AHRMA Varsity Challenge	Millville, NJ	Did not complete.
Concrete Canoe	ASCE Virginias Regional	Virginia Military Institute, VA	2 <sup>nd</sup> out of 6
DBF	AIAA Design/Build/Fly	Wichita, KS	5 <sup>th</sup> out of 97 (see <i>Figure 3</i> )
Formula SAE	Formula SAE Michigan (IC)	Brooklyn, MI	Disqualified
HEVT	EcoCAR Mobility Challenge - Year 4	Yuma, AZ	4 <sup>th</sup> out of 11
HPS	Mate ROV	Memphis, TN	No competition this year.
SailBOT	International Robotic Sailing Regatta	Worcester MA	2 <sup>nd</sup> out of 4
Steel Bridge	AISC Virginias Regional	Virginia Military Institute, VA	1 <sup>th</sup> out of 6
Steel Bridge	AISC National Finals	Virginia Tech, VA	19 <sup>th</sup> out of 34

**Figure 3** - Virginia Tech's Design Build Fly team in Wichita Kansas. DBF has place in the top 5<sup>th</sup> position at five international events over its history competing against over 90 universities and colleges.

Table 4 is a summary of Ware Lab team budgets for this year. Ware Lab teams reported over \$360,300 in corporate, private, and university contributions for 2021-22. Expenditures totaled \$238,120 for a net positive balance of \$122,420 for all teams in the facility. Table 5 lists major corporate and SEC (*Student Engineer's Council*) contributions for this year. Ware Lab teams depend heavily on support from many private sector companies such as *General Motors*, *Lockheed Martin*, and *Monoflow* for support. In addition to corporate contributions, *SEC* support is critical in allowing teams to maintain funds for competition registration fees, equipment, materials, tooling, and traveling expenses. Combined corporate and SEC support totaled \$218,000 in 2021-22!

**Table 4 – Ware Lab Team Sponsorships and Expenditures for 2021-22**

Team	Corporate	Private	Virginia Tech	Total	Expenditures	Net
Astrobotics	\$0	\$0	\$0	\$0	\$3,804	<b>(\$3,804)</b>
Baja SAE	\$35,000	\$4,625	\$8,457	<b>\$48,080</b>	\$36,320	<b>\$11,800</b>
BOLT	\$41,000	\$0	\$6,700	<b>\$47,700</b>	\$34,000	<b>\$13,700</b>
CCT	\$1,500	\$0	\$2,811	<b>\$4,311</b>	\$4,075	<b>\$236</b>
DBF	\$10,500	\$2,500	\$15,450	<b>\$28,450</b>	\$20,263	<b>\$8,187</b>
Formula SAE	\$53,500	\$91,900	\$5,160	<b>\$150,560</b>	\$79,313	<b>\$71,247</b>
HEVT	\$32,433	\$10	\$9,778	<b>\$42,223</b>	\$29,795	<b>\$12,428</b>
HPS	\$7,000	\$0	\$10,700	<b>\$17,700</b>	\$10,087	<b>\$7,613</b>
SailBOT	\$300	\$0	\$3,710	<b>\$4,010</b>	\$3,960	<b>\$250</b>
Steel Bridge	\$0	\$475	\$16,787	<b>\$17,262</b>	\$16,503	<b>\$759</b>
<b>Total</b>	<b>\$181,233</b>	<b>\$99,510</b>	<b>\$79,553</b>	<b>\$360,296</b>	<b>\$238,120</b>	<b>\$122,416</b>

**Table 5 – Major Corporate/SEC Sponsorship for 2021-22**

	Baja SAE	BOLT	CCT	DBF	Formula SAE	HEVT	HPS	SailBOT	SBT	Totals
Swearingen	\$15,000									<b>\$15,000</b>
General Motors	\$10,000	\$10,000			\$10,000	\$7,260				<b>\$37,260</b>

<b>Total</b>	<b>\$38,960</b>	<b>\$43,200</b>	<b>\$3,810</b>	<b>\$15,740</b>	<b>\$58,100</b>	<b>\$34,213</b>	<b>\$14,000</b>	<b>\$4,010</b>	<b>\$6,800</b>	<b>\$218,833</b>

### General Motors Visit to Ware Lab

In April of 2022, representatives from General Motors visited our automotive based teams to discuss team progress and future funding (Figure 4). On hand was GM's lead talent scout for Virginia Tech, Keith Van Houten and GM engineer Marissa Spallucci, who served as co-lead for VT Formula SAE in 2018-19. In addition to team meetings, GM staff conducted multiple technical sessions on the main campus in areas of EV propulsion, lean manufacturing, and hybrid vehicle design.

**Figure 4** – GM's Keith Van Houten (foreground) and Marissa Spallucci (center) visit with Baja SAE (left). Baja team leads discuss CVT drive train design with GM visitors (right).

## [ASCE National Steel Bridge Competition](#)

Article by *Courtney Sakry*, Virginia Tech College of Engineering

Virginia Tech welcomed hundreds of engineering students from across North America to its Blacksburg campus May 27-28 for the [National Student Steel Bridge Competition](#). Virginia Tech's hosting duties were announced at the 2019 Student Steel Bridge Competition at Southern Illinois University. Because of COVID-19, the event was canceled in 2020 and 2021.

The main competition and awards banquet took place in the Beamer-Lawson Indoor Practice Facility (see Figure 5). Turf that normally is covered with footballs and cleats was transformed to hold steel beams and hard hats, and the aesthetics judging area of the competition was located in the concourse of Lane Stadium. During the two-day event, participants had the opportunity to socialize, explore campus, and take in the famous Hokie Stone architecture.

**Figure 5** - Virginia Tech Steel Bridge team members before the national competition. Photo credit Peter Means, College of Engineering.

The Student Steel Bridge Competition is sponsored by the [American Institute of Steel Construction](#), which works with host schools to plan the regional events and national finals. Top teams made up of undergraduate and graduate students from over 20 regional events qualified to compete at the national finals in Blacksburg. The competition challenges student teams to develop a 1/10 th scale-model steel bridge. The bridge layout starts ahead of the build and includes a thorough plan for efficient assembly under timed construction at the competition (Figure 6). Once it is built, each bridge is load tested and weighed (Figure 7). The competing teams are judged in seven categories: construction speed, lightness, aesthetics, stiffness, cost estimate, economy, and efficiency.

“The steel bridge competition is a unique growing experience for students because it presents them with an uncomfortable problem to solve, one which their professor does not have the answer to,” said Zachary Coleman, a graduate student in the [Charles E. Via, Jr. Department of Civil and Environmental Engineering](#) (CEE) who helped organize the event.

Coleman competed in the steel bridge competition as an undergraduate student a few years ago and said the experience was an opportunity for significant personal growth. “For many students, this competition is the first time they must leverage their engineering judgement, research skills, and ingenuity to work toward a solution as a team,” he said. For this year’s event, Coleman was one of three graduate students from CEE who led the planning and organization. Ten other graduate students and multiple staff members also pitched in.

While some of the planning was done in 2019 prior to the national finals’ cancellation, in 2020, much of it had to be reorganized as contracts had lapsed and organizers within the CEE and athletics departments had changed. [Matthew Eatherton](#), faculty lead organizer and advisor for Virginia Tech’s steel bridge team, was pleasantly surprised by how well the event was received.

“I went into the planning process for the Student Steel Bridge Competition National Finals thinking about the opportunity it posed to show off Virginia Tech and our department to top undergraduate students and their faculty advisors from 34 universities in North America,” said Eatherton. “What I didn’t expect was how well the organizing team came together and how many compliments I got about the high quality of the event. It was a great experience.”

**Figure 6** - Students from the Virginia Tech steel bridge team compete in the national finals. Photo credit - Peter Means, College of Engineering.

Virginia Tech not only hosted this year’s event, but also contributed its own steel bridge team, made up of five CEE students who competed and several others who helped in the behind-the-scenes planning and design of the bridge. Tech’s team earned a spot at nationals by placing first in all seven categories at its regional competition in April. While the team didn’t place in the top spots at the national event, it was still a learning experience for all that were involved.

“I cannot think of a better educational experience to help prepare students for careers in design and to help them develop independent thinking,” Coleman said.

**Figure 7** – This year’s steel bridge during load testing at the Ware Lab. Bridges are subjected to six load cases during competition similar to actual civil engineering structures.

## BOLT High Voltage Testing

Ware Lab team members that are exposed to high voltages (>50V) during testing must complete additional EHS safety training and wear necessary personal protective equipment (PPE). The BOLT 4 all-electric motorcycle (Figure 8) uses an EV powertrain with output in excess of 600 volts. Battery array probing involves potential exposure to full voltages, requiring students to be fully insulated during testing. The bike and tester are restricted to a “no-go” zone marked by pilons and an orange chain during high voltage testing, per OSHA regulations.

**Figure 8** – BOLT EV leads during high voltage testing of the 2022 BOLT 4 vehicle.

## Ware Lab Facility Tours

Ware Lab tours are provided to visiting families, student groups, and the general public. Table 6 is a summary of tours for this year with over 500 people visiting from K12 schools, summer engineering camps, along with students who have been accepted to the college of engineering. Ware Lab and AEDL jointly hosted a Virginia Tech alumni event and a college wide open house (Figures 9 and 10).

**Table 6 – Ware Lab Tours for 2021-22**

<b>Organization/Group</b>	<b>Number</b>
4H Junior Leadership Program	42
Accepted Students	8
Alumni Open House	35

**New Ware Lab Equipment**

In 2022 Ware Lab purchased a new 30 foot fully enclosed goose neck trailer for \$23,000 from Anchor Sales in Salem, Virginia (Figure 11, left) to be used by Ware Lab teams needing transport of vehicles and equipment to competition events. With this purchase our lab fleet now consists of two goose-neck and three ball-hitch trailers (Figure 11, right). Virginia Tech and student team logos will be added to the new trailer in 2022-23.

**Figure 11** – New goose neck trailer (left). Ware Lab trailer fleet (right)

## Ware Lab Demographics

Ethnicity, gender, academic level, major, academic credit and transfer information is gathered each year when students complete the general admissions survey. Completion of this survey is one of several items needed in order to receive a lab badge. Summaries of collected data are shown in Tables 7 through 11. Figure 12 discusses how students learned about the Ware Lab and Figure 13 shows the square footage allocated to each team on a percentage basis. Most students discovered Ware Lab via team information sessions. Team access to the greater lab area and machine shop are shown in Figures 14 and 15 with Formula and Baja SAE using the facility over 60% of the time. Based on collected data, trends in these demographic areas are shown in Figures 16 through 19.

**Table 7 – Gender and Ethnicity**

Gender	Ethnicity	Total	Percent (lab total of 557)
<b>Female</b>	African American	4	1%

**Figure 13** – Lab Square Footage based on total of 10,100 ft<sup>2</sup>  
\*Denotes common-use area.

## Team Lab Access

Students have access to the general areas and machine shop after hours via the *Hokie Card* swipe system. Figures 14 and 15 provide a summary of student access to these areas based a team breakdown. Formula SAE utilized the general Ware Lab area the most at 44% and Baja SAE used the machine shop the most at 47%.

**Figure 14** – Team Access to General Ware Lab Area (% 4255 card swipes).

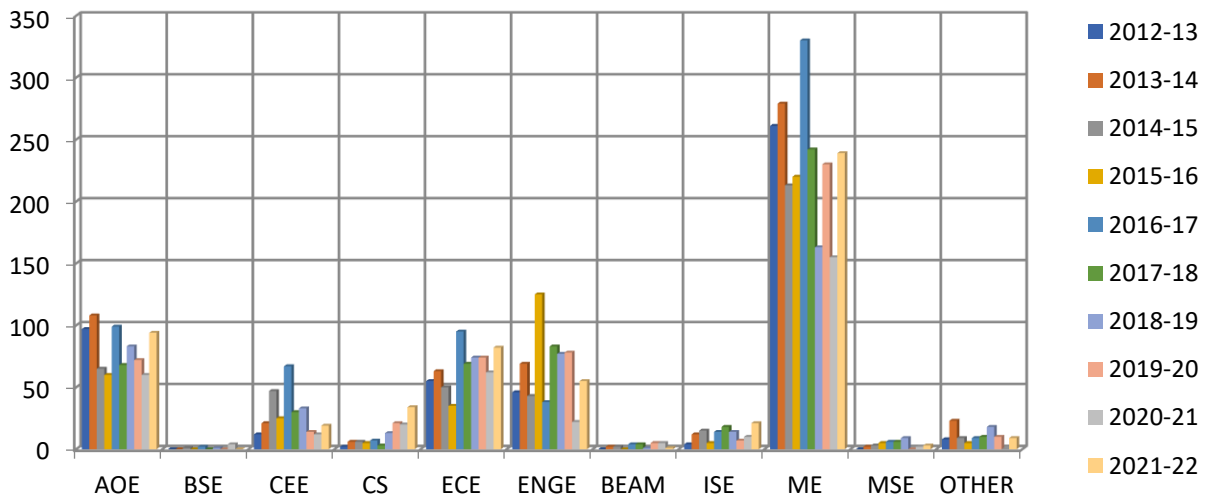

**Figure 15** – Team Access to Ware Lab Machine Shop (% 6562 card swipes).

## Demographic Trends

Since 2012, students using the Ware Lab have completed a survey indicating academic level, major, and team affiliation. Based on collected data, trends in these areas are shown in Figures 16 through 18. Figure 19 shows trends for Ware Lab gender and ethnicity, starting in 2014.

**Figure 16 – Academic Levels (student number).**

**Figure 17 – Academic Majors (student number).**

Figure 18 – Teams (student number).

Figure 19 – Gender (left), Ethnicity (right) in student numbers.

## Lab Expenditures

Tables 12 and 13 include truck/trailer expenditures for general maintenance and fuel, respectively. In spite of COVID 19 restrictions, many teams were allowed to travel to destinations throughout the United States to represent Virginia Tech at world class competitions using the lab's truck and trailer fleet. Table 14 is a list of Ware Lab general material, equipment, and maintenance expenditures including the extensive repair of our existing goose neck trailer and the purchase of a new goose neck trailer, increasing our fleet to 5 trailers in all. In total, Ware Lab spent \$59,700 in order to ensure team success at national and regional competition events in 2021-22.

**Table 12 – Truck/Trailer Maintenance**

Vendor	Total
Anchor Sales	\$686
Auto Experts	\$3,849
Blacksburg Auto Parts	\$258
Pro-Line Trailers	\$17200 (gooseneck trailer repair)
<b>Total</b>	<b>\$21,821</b>

**Table 13 – Fuel Expenditures**

Vendor	Total
7-Eleven	\$145
Andrew's Fastbreak	\$100
Aplus	\$145
Blacksburg Auto Parts (DEF fuel treatment)	\$122
C.C. Food Mart	\$80
Casey's General Store	\$285

Guy Brown	\$1,557
Homestead Materials	\$88
McMaster-Carr	\$88
Monitronics International	\$320
MSC	\$2,250
Original Frameworks	\$500
Sanico	\$482
The Supply Room	\$134
<b>Total</b>	<b>\$38,405</b>

## Conclusion

This annual report for the *Joseph F. Ware Advanced Engineering Design Lab* for 2021-22 includes competition results, student demographics, outreach events and lab expenditures. Undergraduates from multiple majors comprise teams that design, manufacture and compete top tier projects.

Demographic trends indicate that, in this year, the third largest number of students (557) completed EHS training since 2012. EHS training is necessary in order to work in the Ware Lab facility. A total of 58 students received machine shop training with 14 students completing advanced Hurco CNC orientation. 23 students received hot work certification and 21 passed truck/trailer driver orientation which is necessary to operate our fleet vehicles.

Virginia Tech's College of Engineering spent over \$46,000 to cover costs associated with truck/trailer maintenance and repair, fuel, and machine/welding supplies. A new goose-neck trailer costing \$23,200 was also purchased, increasing our fleet to five trailers.

Ware Lab team members met the challenge of completing project goals and succeeding at sponsored events. Many Ware Lab teams exceeded expectations with top competition performances at world class, international events. Baja, Steel Bridge, Concrete Canoe, DBF, and HEVT earned top five positions at sponsor events throughout North America. Due to the dedication of these teams, the *Joseph F. Ware, Jr. Advanced Engineering Lab* continues to be an exciting and vibrant place for undergraduate competition-based projects in Virginia Tech's College of Engineering.

Appendix A – Ware Lab Team Posters for 2021-22

**Astrobotics**

# Astrobotics

**Digging Subsystem**

The dig subsystem is made up of a bucket elevator suspended by a roller-gantry and 2 vertical linear screws. The driving of the linear screws actuates the bucket elevator into the ground whilst rotating it, digging material in an arc until the elevator stops at an 85° angle to dig the icy regolith.

**Chassis and Drive Subsystem**

The chassis and drive system uses a 6-wheel tank drive design. The frame is designed from 0.75" square aluminum tubes welded together to best balance cost, weight, and strength. The center wheels on either side are positioned slightly lower than the outside wheels to provide passive suspension when traversing rough terrain. All wheels are made from aluminum and use steel axles.

**Deposition Subsystem**

The deposition system is a fixed conveyor with small walls funneling dumped material onto the conveyor. All material is dumped until the dig mechanism begins mining icy regolith.

**Full Design**

**External Advancements**

The team also expanded our 3D printing capabilities this design cycle by adding 2 Ender 5's, as well as Octoprint to the Ender 3's. This allows us to easily prototype designs and manufacture low-strength parts for our final product.

**Team Major Breakdown**

# Baja SAE

VIRGINIA  
TECH

Faculty Advisor: Jared Bryson  
e-CVT Project: Rounak Ahmed, Alex Coonin, Dhietmar Cruz Herbas, Nick Kreuschler  
Custom Brake System: Ryan Barolo, Bryan Meldrum  
Dynamometer Redesign: Jack Blazek, Destiny Mason, Matthew Shealy

### e-CVT Project

**Problem Statement**

- Design and manufacture an electronic Continuously Variable Transmission (e-CVT) for an off-road vehicle

**Key Target Specifications**

- Follows Baja SAE competition rules
- Improve acceleration performance
- Maintain engine's peak power performance

**Final Design**

**Validation Results**

- Meets 5 out of 8 Marginal Specifications
- Does not weigh unreasonably more than a CVTech Primary

**Conclusion**

- Tuning an e-CVT is quicker than a conventional mechanical CVT previously used by the team
- An e-CVT can lead to a better testing suite for future cars as well as a higher performing transmission overall

### Custom Brake System

**Problem Statement**

- Design a custom hydraulic braking system for the vehicle
- Improve serviceability
- Reduce weight
- Improve handling

**Key Target Specifications**

- Follows Baja SAE competition rules
- Brake pedal feel
- Structural integrity
- Time to bleed the system

**Final Design**

**Validation Results**

- Meets all 14 marginal specifications
- Meets 4 ideal specifications
- Properly functions and stops the car

**Conclusion**

- Bias bar and larger master cylinders are beneficial and worth pursuing in future years
- Use of differently sized calipers in the front and rear can improve brake performance

### Dynamometer Redesign

**Problem Statement**

- Design and manufacture a small engine and CVT dynamometer for Baja SAE application
- Safety of users
- Benchmark CVTs and engines
- Reduce downtime

**Key Target Specifications**

- Rules compliant (EHS, OSHA, Baja SAE)
- Multiple methods to stop the dynamometer
- React predictably when power is lost

**Final Design**

**Validation Results**

- Of the tests that have been completed, the product meets both marginal and ideal values
- 8 specifications left to validate

**Conclusion**

- The new design is more structurally stable and does not rest on deployable casters during operation
- Linearly actuated engine mount allows different designs of CVTs to be tested

# Battery Operated Land Transport (BOLT)

**Faculty Advisor:** Dr. R.L. Clark Jr.  
**Key Sponsors:** General Motors, Yamaha Motorsport Ventures, Lockheed Martin

## Team 4: BOLT Chassis

**Senior Design Members:**  
 Patrick Cole, Brandon Harris, Parker Jones, Evan Jost, Yanni Koutsidis, Matt Slugo, Alex Sturdam, Nolan Vess

### Introduction

BOLT design, build, and race electric motorcycles. The goal of this year's project is to develop the next iteration BOLT bike that will compete in the AFEMA Formula Lightning Division. The chassis team focus on the mechanical aspects of the motorcycle. Additionally, the team is expanding sub-system testing capabilities.

- This year's project:
  - The team's first electric motorcycle chassis designed and fabricated in-house
  - Battery structure with emphasis on protection and safety
  - Test bench for full off-bike validation of cooling system

### Customer Needs

The team held discussions with our faculty advisor and potential customers to develop customer needs and target specification values.

Meets Track Performance of 1000cc Sportbikes
Reliable Under Repeated Track Use
Good Handling in Corners
Ease of Assembly
Low Cost
Accurately Collected Data*
Stumble-free Power Addition*
Stumble-free Pressure Drop*

\*Denotes customer needs for off-bike cooling test bench

### F.E. Analysis

- Frame
  - Inertive loading condition on each mounting node to reach FOS ~ 2.0
  - 2250 N on each mounting node
  - FOS of 2.19

- Motor Mount
  - Maximum motor torque loading
  - FOS of 11.67

- Front Battery Back
  - 10 g vertical loading condition
  - FOS: 3.8
  - 5 g lateral loading condition
  - FOS: 1.98
  - 3 g longitudinal loading condition
  - FOS: 1.77

### BOLT V Final Design

#### Battery Structure

- Improved battery protection and battery cooling
- Made of aluminum, polycarbonate, and from fastened mounting points for ease of assembly

#### Motor Mount

- Designed and machined a new motor mount for our EVO AF130 motor
- Made of A36 pickled and tempered steel
- Includes integrated mount for the top battery pack

#### Custom Frame

- Designed and machined a new frame for our EVO AF130 motor
- Made of 4130 Steel
- Includes nodes for both motor and battery pack mounting

### BOIT V Validation

The Chassis team conducted extensive vibration testing on the target specifications developed in Fall 2021. This testing was conducted in our space in the Ware Lab and at the dynamometer at Harley-Davidson Kenosha. All target specifications were met for both the cooling test bench and BOLT V.

BOIT V Motorcycle	
Assembly Time	5.9 hr*
Total Bike Cost	\$2,447*
Lean Height	55"
Total Bike Mass	188 kg*
Center of Gravity	34.7 in.±3
Battery Max Temperature	34 °C*
Cooling Test Bench	
Heat Addition	2.15 kW
Baseline Pressure Drop	7.0 psi*
Temperature Error	0.18 °C*

\*Denotes values that exceed labor values

### Frame Geometry

The frame was designed to have similar characteristics to the Yamaha R1M and BMW S1000RR, which are the bikes our riders are most familiar with. The frame characteristics will improve rider familiarity and thus track performance.

	Yamaha R1M	BMW S1000RR	BOLT V
Rake Angle (deg)	24	23.1	23.2
Wheelbase (cm)	140.3	144.02	145
Trail (cm)	10.2	9.4	9.7

### BOIT V Future Considerations

- Minimize motor mount weight
- Reduce battery weight
- Prove BOLT V for on-track testing
- Frame fatigue analysis using strain gauges

### Cooling Test Bench Final Design

# Team 4: BOLT Powertrain-Controls

## Senior Design Members:

Will Gessner, Robin Ahlers, Matthew Ruhiman, Nathan Guy, Jared Mann  
Faculty Advisor: Dr. R.L. Clark Jr.

Key Sponsors: General Motors, Yamaha Motorsport Ventures, Lockheed Martin

### Problem Statement and Motivation/Background

The goal of BOLT is to design, construct and race a high-performance electric motorcycle. BOLT V is our fifth generation of motorcycle. We compete in the American Historic Racing Motorcycle Association's Formula Lightning class. The powertrain and controls subsystems seek to maximize both power and reliability of our motorcycles on the track. Powertrain focuses on the high voltage electrical system and drivetrain while controls handles the low voltage communications system.

BOLT IV races at New Jersey Motorsport Park, 2021

### Customer Needs

Safe High Voltage System	1000cc Sportbike Performance
Reliability Under Track Use	Efficient Drivetrain
Data Viability	Relevant Data Collection
Familiar Feel for Rider	Ease of Assembly

### Target Specifications

Eng. Characteristic	Units	Marginal Value	Ideal Value
Battery Max Temperature	°C	80	60
The Temperature Error	%	5	2
Wheel Power	kW	90	125
Assembly Time	hours	12	8
Total Bike Mass	kg	216	200
Wheel Torque	Nm	200	300
Peak Voltage	V	600	700
Battery Pack Capacity	kWh	10.5	13

### Analvtical Methods

- Battery selection optimization calculations
- Battery capacity tests
- Experience with BOLT IV led us to want to improve
  - Wire routing organization
  - Internal battery pack resistance
  - Design for assembly

### BOLT V System Design

### Product Evaluation

A combination of in-house and dynamometer testing was used to validate BOLT V's design against our target specifications. The dynamometer testing was performed at Harley-Davidson of Roanoke.

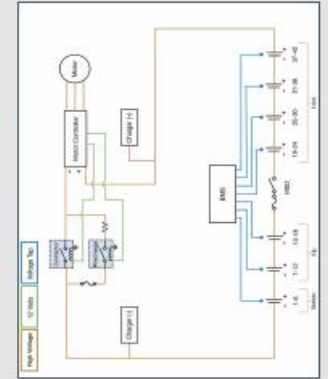

Engineering Characteristic	Measured Value
Battery Max Temperature	34 °C
The Temperature Error	4 %
Wheel Power	110 kW
Assembly Time	6 hours
Total Bike Mass	168 kg
Wheel Torque	233 Nm
Peak Voltage	634.5 V
Battery Pack Capacity	6 kWh

### Low Voltage System

### High Voltage System

### The Future of BOLT V

Next year's BOLT senior design team will continue work on BOLT V by:

- Performing more extensive dynamometer testing on the powertrain
- Preparing the motorcycle for a track environment
- Addressing how to finish a race with BOLT V's limited battery pack capacity

# Hull Design and Structural Analysis

## THE GREAT BOATSBY

## SPECIFICATIONS

Color: Gray

Wall Thickness:  $\frac{3}{4}$  in

Length: 18 feet

Max Width: 33.4 in

Max Depth: 20.25 in

## Reinforcement:

Primary: Basalt Mesh Reinforcement

## Hull Features:

- Symmetric hull with flat bottom to increase stability
- Increased freeboard from previous designs

## Structural Analysis:

- Five loading scenarios analyzed
- Proposed design used to calculate shear and bending moment

# Hull Design and Structural Analysis

## MOLD FABRICATION

3D Model of hull design  
CNC Router  
Symmetrical hull makes it easier

## POUR DAY

Concrete and reinforcement placement  
Intense QA/QC procedures

## CURE AND FINISH

28 day cure  
Daily monitoring  
Sanding and finishing

## FORM FINISHING

QA/QC measures implemented  
Sanding, filling, priming, waterproofing

## REPURPOSING OLD FOAM BLOCKS

Sustainable and inexpensive  
Time intensive  
“tetra” stack

# Design Build Fly (DBF)

## AERODYNAMICS

Designs the aircraft and wing configuration. Analyzes and determines the aircraft parameters

Uses tools such as:

- OpenVSP
- XFLR5
- XFOIL
- Computational Fluid Dynamics (CFD)

## STABILITY AND CONTROL

Designs the aircraft tail and control systems. Determines the aircraft flight characteristics.

Uses tools such as:

- XFLR5
- XFOIL
- Athena Vortex Lattice (AVL)

## STRUCTURES AND CAD

Designing model of aircraft in CAD and analyzing structural components using FEA software to ensure structural integrity of aircraft.

Uses tools such as:

- SolidWorks
- MATLAB

## SYSTEMS

Designs, integrates, and tests system components based on the mission rules.

Uses tools such as:

- SolidWorks
- MATLAB
- Arduino

## PROPULSION / ELECTRONICS

Designs propulsion systems and tests the combination of propeller, motor, ESC, and batteries to optimize aircraft performance.

Uses tools such as:

- E-Calc
- MotoCalc
- RC Benchmark
- Open-Jet Wing Tunnel
- Static Propulsion Testing Rig

## MANUFACTURING

Constructs the aircraft and makes design changes to maintain manufacturability.

Uses tools such as:

- Laser-cutter
- CNC Router
- 3D Printer
- Composite Manufacturing
- Shop Tools

## 2022 PROJECT

The 2021-22 rules required a UAV with package transportation and deployment system designed to accomplish several mission requirements. The key points include:

- Carry syringes and vaccine via packages
- Deploy vaccine vial packages
- Minimize force on transported and deployed packages to under 25G
- Have a maximum wingspan of 8'
- Takeoff within 25'

The team finished 5<sup>th</sup> in the report portion of the competition, and 5<sup>th</sup> overall in a field of 97 teams.

## 2022 TEAM

## PREVIOUS SUCCESS

2<sup>nd</sup> Place  
2018-19 Competition

4<sup>th</sup> Place  
2014-15 Competition

Welcome to DBF! We are an interdisciplinary engineering team open to all undergraduate engineering students. Each year, the team competes in the international Design Build Fly competition hosted by Raytheon, Textron Aviation, and AIAA. The team works together to design, build, and test remote controlled aircraft in preparation for the competition in April which alternates each year between Wichita, Kansas and Tucson, Arizona.

## PROJECT SCHEDULE

## SPONSORS

**Formula SAE (FSAE)**

**TEAM #44**

COLLEGE OF ENGINEERING  
MECHANICAL ENGINEERING  
VIRGINIA TECH

**MONOFLO**  
INTERNATIONAL

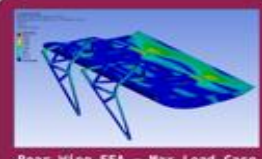

The Formula SAE competition is for SAE student members to conceive, design, fabricate, and compete with small formula-style racing cars. The restrictions on the car frame and engine are limited so that the knowledge, creativity, and imagination of the students are challenged. The cars are built with a team effort over a period of about one year and are taken to the annual competition for judging and comparison with approximately 120 other vehicles from colleges and universities throughout the world.

**Faculty Advisor:** Dr. Richard Clark & Mr. Scott Lancaster  
**Team Members:** Sidney Eugene Dennis, Daniel Donate-Perez, Nick Gillem, Cody Hasler, Ashton Heng, Jin Ho Kim, Jeremy Kochan, Max Kreuzer, Prerit Kwatra, Thomas Van Sporp, Brandon Pseroni, David Slade, Jason Smith, Brandon Walter

<b>Dry Project Weight:</b> 485 - 415 lb	<b>Final Drive:</b> 2.5:1
<b>Engine Package:</b> Yamaha YZ450FX w/ Garrett MGT1238Z Turbocharger	<b>Tires:</b> 16.0x6.0-10 Hoosier LC0
<b>Fuel:</b> E85	<b>Wheelbase   Track:</b> 60.5 in   47 Front & 47 Rear
<b>Peak Engine Power:</b> 78 HP @ 11,000 rpm	<b>Chassis Construction:</b> Hybrid Carbon Fiber Monocoque w/ Steel Tube Rear Frame
<b>Peak Engine Torque:</b> 38 lb-ft @ 8,700 rpm	<b>Downforce   Drag:</b> 182 lbf @ 50 mph   67 @ 50 mph

Rear Wing FEA - Max Load Case

Rear Driveline Assembly

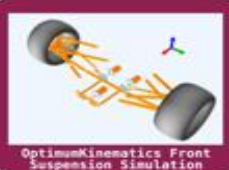

External Oil Pump

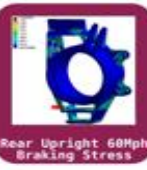

Engine Assembly

Rear Corner Assembly

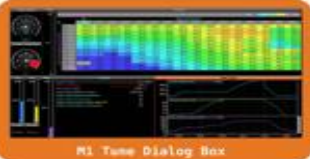

Optimum Kinematics Front Suspension Simulation

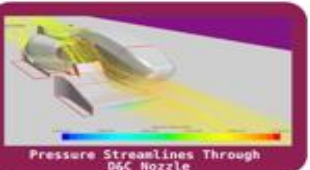

Rear Upright 60Mph Braking Stress

Front Suspension

PI Tune Dialog Box

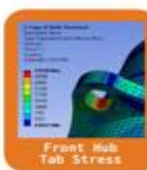

Pressure Streamlines Through D&C Nozzle

Front Corner Assembly

Front Brake FEA

Front Hub Tab Stress

Engine

Single cylinder 2019 Yamaha 450 cc engine with custom S-axis machined injector housing and exhaust header. Carbon-fiber intake created with dissolvable 3D printed filament to achieve complex geometry. In-house design and manufacture of an external two-stage oil pump to utilize the Garrett MGT1238Z turbocharger.

Drivetrain

Biased brake tabs optimized for stress distribution. Aluminum sprocket adapter to improve tunability and test different final drive ratios. Pedal box designed for adjustability and driver ergonomics. Centerlocking hubs for weight reduction and vehicle serviceability.

Suspension

Hybrid; 2/3 carbon monocoque with steel tube rear frame section. Chassis carbon sequences are structurally tested to meet FSAE SES Testing criteria. Front heave spring designed to reduce corner entry understeer.

Aerodynamics

Package designed for 182 lbf of Downforce with only 67 lbf of Drag at 50 mph. Conducted aerodynamic simulations on full car models to predict drag and down force values. Waterjet aluminum structures to reduce manufacturing complexity and compliance configurations.

### COMPETITION

Biennial competition to design, build and race human powered submersibles sponsored by the Foundation for Underwater Research and Education

### TESTING

Opportunity to train divers for competition and test systems throughout design and manufacturing process

### DESIGN AND MANUFACTURING

Competition cycle split into two years for designing and building the submarine. Extensive work with sponsors and faculty to improve design.

# SAILBOT AT VIRGINIA TECH

JOSEPH F. WARE, JR.  
ADVANCED ENGINEERING LAB

### What is SailBot?

SailBot is an engineering competition open to all ages and skill levels where the goal is to design, build, and compete against teams from around the world with a 2 meter autonomous sailboat.

At Virginia Tech all majors and skill levels are invited to help in every part of the process. All team members are volunteers, participating for the experience and the fun of it!

SailBOT allows for real-world application of classroom learning along with the development of inter-personal skills, time and finance management, and public speaking.

### Subteams

- Software: responsible for boat autonomy through sensor utilization and machine learning
- Electrical: responsible for boat and shore hardware and communication and sensor implementation
- Mechanical: responsible for the design and manufacturing of moving parts and appendages
- Propulsion: responsible for sail design and construction
- Naval Architecture: responsible for the overall design of the boat and construction of structural elements

### History

2012: Initial Founding of SailBOT at Virginia Tech

2018: Revival of team

2019: Placed 2nd at International Robotic Sailing Regatta

2020- Competition not held due to COVID-19

2021: COVID-19

2022: Placed 2nd at International Robotic Sailing Regatta

### Reach Out

[www.sailbot.aoe.vt.edu](http://www.sailbot.aoe.vt.edu)

@sailbotvt

SailBOT at Virginia Tech is committed to creating an inclusive and welcoming space for all regardless of gender, race, sexuality, national origin, religion, or ability level.

# Virginia Tech Steel Bridge 2021-2022

### Bridge Configuration

A box girder bridge design was chosen due to the significant restraints on depth above the stringer, as well as the advantageous depth to width ratio for stiffness in both vertical and lateral planes.

### Analysis

Multiple analysis approaches were considered in the final design including CAD and large scale prototyping. RISA 3D was employed to analyze the entirety of the bridge design for deflection and stress. Additionally, large scale prototyping helped to take a closer look at individual connections.

### Accelerated Bridge Construction

In an effort to cut down on construction time, the bridge was designed to eliminate unnecessary bolt locations other than those in tension. Additionally, working together on both sides of the roadway during construction proved to be most beneficial.

### Side View
